

Publishing to iSpring Viewer

iSpring Visuals offers an easy way to make your interaction more effective. With this tool, you can access your interactions on a wide range of devices, including Android tablets and iPads.

If you want to allow your users to store interactions locally on an Android tablet or iPad for offline viewing:

1. Select the **Use iSpring Viewer** checkbox
2. Next, upload your published interaction to any web site and share the link to the interaction with your users.
3. Then open the interaction link in the browser on your tablet. You will see the screen with the **Launch** button.
4. Tap **Launch** to view your interaction in the **iSpring Viewer** app.

If the application is not installed on your device, you'll be asked to download it from the [Google Play](#) or [Apple App Store](#).

To start interaction playback, select it in the list and tap the **Play** button.

You can access interactions even when you are offline. To download an interaction for offline viewing, move the **Offline Viewing** slider to **On**. If you change it back to **Off**, the offline copy will be removed from your device.
