

# Importing Audio

iSpring Pro supports the following audio formats: wav, mp3, wma.

You can select one of the available import options:

- [One audio file to each slide](#)  
The duration of each slide will match the duration of audio that was imported. You can import one or multiple files at once.
- [Audio files across slides](#)  
One audio file will play over several slides.

All imported files will be automatically copied to the presentation resource folder. This way, you won't lose inserted clips even if you move your presentation to another computer.
