

Managing Narrations

iSpring Converter gives you the opportunity to deliver audio narrations to your audience. There are two ways to add narrations to your presentation: importing existing audios, and recording them right within your PowerPoint. Easy to handle and synchronize.

The recommended way to manage narrations is to use the built-in [Narration Editor](#), where you can:

- [Record audio narration](#)
- [Import audio narration](#)
- [Import background audio](#)
- [Sync narrations with your presentation](#)

However, you may also record audio using the **Record Audio** button:

- [Record audio](#)
