

# Arranging Images and Equations

Images and equations on a slide can overlap each other. In this case you can arrange how they are stacked by sending them backward or forward.

To do that:

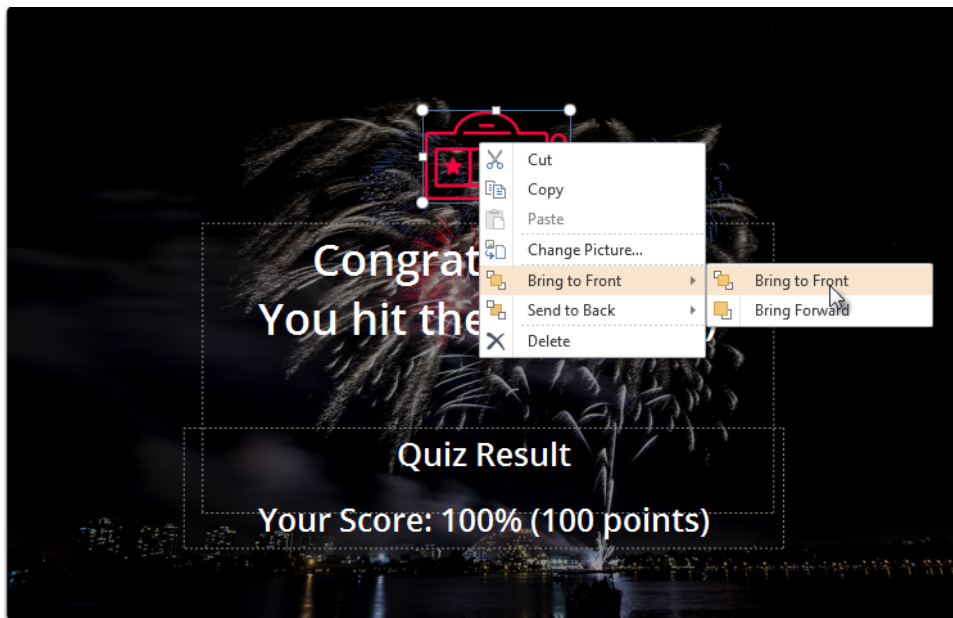

1. Select an object (image or equation) on a slide
2. On the ribbon, click the **Bring to Front** or **Send to Back** buttons.

or

Right-click an image or an equation and choose one of the four available actions from the drop-down menu:

- Bring to Front
- Send to Back
- Bring Forward
- Send Backward

You can select multiple objects on a slide and change arrangement of all selected objects at once.
