

Locking the Player Controls

You can restrict user navigation by disabling the player navigation controls. If you lock them, navigation will be disabled in the following areas:

- Outline
- Thumbnails
- Timeline
- Previous/Next
- Replay

The screenshot shows the 'Presentation Explorer' window with a toolbar at the top and a table of slides below. The toolbar includes buttons for 'Save & Close', 'Hide Slide', 'Promote Demote', 'On-Click', 'Auto', 'Slide Duration' (00:10,00), 'Branching', 'Lock', 'Presenter', 'Layout', and 'Playlist'. The 'Lock' button is highlighted with a red callout box that says 'Click to lock/unlock navigation controls of the selected slides'. The table below has columns for '#', 'Title', 'Advance', 'Branching', 'Lock', 'Presenter', and 'Playlist'. Slide 3, titled 'Getting Started', is selected and has a lock icon in the 'Lock' column, with a red callout box that says 'Click to lock/unlock navigation controls of a slide'.

#	Title	Advance	Branching	Lock	Presenter	Playlist
1	iSpring Converter Pro	4,0s	Default			
2	iSpring Converter Pro	11,5s	Default		Monique ...	Full
3	Getting Started	10,0s	Default	Lock	Monique ...	No Sidebar
4	Create Your Course in PowerPo				Monique ...	Full
5	Set Up Presentation Structure	13,0s	Default		None	No Change

In player, when your mouse pointer is over the Outline or navigation buttons, you will see the lock icon on them. Users won't be able to move to the locked slide.

Note: Even if navigation is locked, users can navigate to another slide on click or automatically. Disable [Automatic](#) or [On-Click navigation](#), if you want to completely restrict user navigation.
