

Advanced Properties

Use the **Advanced** tab to configure the conversion options, specify the size of a presentation and edit settings to control Flash and HTML5 presentation playback.

The screenshot shows the 'Publish Presentation' dialog box in iSpring Suite. The 'Advanced' tab is selected, showing settings for content, multimedia, HTML5, and Flash. On the left, there's a sidebar with icons for WEB, CD, iSpring Cloud, iSpring Learn, LMS, and Video. The main area has tabs for General, Playback and Navigation, Compression, Advanced, and Protection. The 'Advanced' tab contains several sections: 'Content Properties' with 'Fit to window' checked, 'Size' set to 720 x 540 pixels, 'Scale' at 100%, and a background color picker; 'Multimedia Objects Processing' with 'Enable slide video controls' checked and 'Generate narration files for each slide' unchecked; 'HTML5 Properties' with 'Extended audio and video compatibility' unchecked and 'Extended font compatibility' checked; 'Flash Movie Properties' with 'Detach Media Content' checked, 'Flash movies' and 'Video clips' checked, 'Audio files' unchecked, 'Flash version' set to Flash 10, 'Frame rate' at 24, 'Disable Flash menu' and 'Disable "Print" option' unchecked; and 'Preloader' with 'Add preloader' checked. At the bottom, there are 'Import/Export', 'Publish', and 'Cancel' buttons.

Content Properties	
Fit to window	Scales the presentation up to fit the entire screen area of your browser.
Size	Width and height of the output presentation.
Scale	Percentage of the published presentation size relative to the original presentation size.
Background	You can choose a background color for the entire presentation. Clicking the current color next to this option will open a standard window where you can select an appropriate color.

Note: Width, height and scale are related parameters and iSpring maintains the aspect ratio as you change one of these parameters. iSpring technology allows you to reduce the height and the width of the presentation without loss of clarity.

Multimedia Objects Processing	
Enable slide video controls	This option enables or disables a control bar that appears when a video or audio object is played on a slide.

Generate narration files for each slide	When the option is enabled, one narration will be cut into separate clips equal to the slide length. By default, the option is disabled. Your narration will not be split into parts which ensure smoother playback at the slides change.
--	---

HTML5 Properties	
Extended audio and video compatibility	Check this option to turn on audio and video compatibility with Firefox and Opera browsers. If this option is checked, iSpring Converter Pro will generate additional audio and video files for Firefox and Opera browsers. Note: Enabling this option will increase the final size of the HTML5 presentation.
Extended font compatibility	Check this option to generate True Type fonts for HTML5 browsers not supporting compressed WOFF fonts. This option will increase the final size of your presentation since additional font files will be generated.

Flash Movie Properties	
Detach media content	It makes sense to use these options, if you convert a presentation into a solid Flash movie .
Flash version	Select the Flash Player version.
Frame rate	The number of Flash frames per second. Low FPS is not recommended, because this can cause flickering in animations.
Disable Flash menu	Disables the right-click menu and top menu in a generated Flash movie window.
Disable "Print" option	Select this option if you don't want to allow the printing of your output Flash presentation. 'Print' option in the right-click menu will be disabled in the generated Flash file.

Note: HTML5 Properties are disabled if you publish your presentation to Flash. Flash Movie Properties are disabled when publishing Presentation to HTML5.
