

Adding a User to a Group

You can add a user to a group with the **addUserToGroup** method.

Permission to run the request: Account Owner, Administrator, Organization Administrator.

Parameters

Parameter	Type	Description
credentials (required)	credentials	Read the description of the Credentials object.
groupId (required)	string	ID of a group to which a given user will be added.
userId (required)	string	ID of a user to be added to a specified group.

Return Value

After the request has been completed, the system returns an object with the following properties:

Parameter	Type	Description
success	bool	'True' if the user has been added to the group.

Possible Errors

Error	Description
Unknown user	The specified user hasn't been found.
Unknown group	The specified group hasn't been found.
Permission denied	You do not have permissions to edit the group.
User already group's member	The given user already belongs to the specified group.
Wrong parameters	The system failed to process the request because it did not contain all necessary parameters.
Can't add user into group from another organization	You are not allowed to add a user into a group from another organization.
