

# Result

In this window you can define the finishing actions and specify reporting details.

The screenshot shows the 'Quiz Properties' dialog box with the 'Result' tab selected. The 'Quiz type' is set to 'Graded'. The 'Result' tab is active, showing options for actions to perform when a user finishes the quiz. The 'If user passes' tab is selected, and the 'Finish Action' section has 'Close browser window' selected. The 'Reporting' section has 'Send quiz result to email' checked, with the email addresses 'brian.tarr@gmail.com, john.smith@gmail.co' entered. The 'Send detailed results' checkbox is also checked. The 'Send quiz result to server' checkbox is unchecked, and the 'Disable quiz review if unable to send the report' checkbox is also unchecked. The 'OK' and 'Cancel' buttons are at the bottom right.

 Close browser window  
 Go to URL:   
 Open in a new browser window

**Reporting**

Execute JavaScript   
 Send quiz result to quiz taker's email  
 Send quiz result to email   
 Send detailed results   
 Send quiz result to server   
[? Learn more about sending results to server](#)  
 Disable quiz review if unable to send the report

OK Cancel

Result properties are split into two parts: if a user passes the quiz and if a user fails it. So when you configure these options, make sure you go through both tabs.

<b>If user passes</b>	Choose the actions that will be performed if users pass the quiz.
<b>If user fails</b>	Choose the actions that will be performed if users fail the quiz.

<b>Close browser window</b>	When users finish the quiz, the browser window in which users are viewing your quiz will close.
<b>Go to URL</b>	When users finish the quiz, they will be directed to a web page. Specify whether a web page should open in a new browser window by selecting the <i>Open in a new browser window</i> checkbox.
<b>Execute JavaScript</b>	When users finish answering the questions, user-defined JavaScript will be executed. For more information check <a href="#">JavaScript Editor window</a> .
<b>Send quiz results to quiz taker's email</b>	Enable this option if you want to send the results of a quiz to a user who takes the assessment. You can find more details in the <a href="#">How to send quiz results to Quiz taker</a> article.
<b>Send quiz result to email</b>	Select this checkbox to automatically email quiz results to the specified email address. To send quiz results to multiple recipients, enter their email addresses in this field and separate them by commas (email1@gmail.com, email2@gmail.com etc.)
<b>Send quiz result to server</b>	Select this checkbox to automatically send quiz results to a server.  You can receive detailed quiz results on your server using variables and an .xml document sent as a POST request. The following variables are sent to a server via POST method: <ul style="list-style-type: none"> <li>• v - report version</li> <li>• dr - detailed results in .xml format complying with the schema below</li> <li>• sp - earned points</li> <li>• ps - passing score OR psp - passing score in percent, that is how much of a total score in percent a user must gain to pass a quiz</li> <li>• tp - gained score</li> <li>• sn - quiztaker username</li> <li>• se - quiztaker email</li> <li>• qt - quiz title</li> </ul> <p><b>Note:</b> Whether the program sends psp or ps depends on the Passing Score option (<a href="#">Quiz Properties -&gt; Main</a>). If the Passing Score is specified in percentage, the program will send 'psp', if in points - 'ps'.</p> <p>For more information, you can check the article <a href="#">How to send quiz results to server</a>.</p> <p>Note: If this option is selected, a user will be prompted to enter their email and name when the quiz is started.</p>
<b>Send detailed results</b>	Select the checkbox to receive detailed info on the questions and users' answers to your email address. E.g. answer options and the selected answer for Multiple Choice questions.  In addition, you can customize name and subject of the email to easily manage incoming reports. You can also choose details of each question that will be displayed in the email. For more information check <a href="#">Quiz Report Customization</a> .  Note: If this option is selected, a user will be prompted to enter their email and name when the quiz is started.
<b>Disable quiz review if unable to send the report</b>	Activate this option to hide the Review button if quiz results aren't sent to your email or server for some reason. This can prevent students from cheating, even if quizzes are taken offline.
