Managing Presentations

The iSpring Suite tab includes a Presentation section with tools for managing the structure and additional resources of your presentation.

There are three tools for managing the presentation:

- **Slide Properties** - for organizing the presentation structure, setting up slide advance options and navigation restrictions, and adding presenters.
- **Presentation Resources** - for managing references, attachments, and links to external resources in the presentation.
- **Player** - for adjusting the appearance of the player and playback settings.
