

iSpring Learn

Welcome to iSpring Learn Guide!

iSpring Learn is an easy-to-use hosted Learning Management System (LMS). It allows you to deploy distance learning in your company in a matter of hours. With numerous reports available in iSpring Learn LMS, you can get accurate and reliable data to evaluate the effectiveness of your training program.

Check out this video to learn how to get started.

iSpring Learn is tightly integrated with iSpring Suite, a course authoring toolkit. You can create your e-Learning content with iSpring Suite and upload them in one click to the iSpring LMS.

However, iSpring LMS doesn't put any limitations on your authoring tool choice. Along with the iSpring-made courses, presentations, and quizzes, you can publish the following content types to iSpring LMS:

- SCORM 1.2 and 2004 (all editions)
- Video (.FLV and .MP4)
- Audio (.MP3)
- Documents (.DOC, .XLS, .PDF)
- PowerPoint Presentations (.PPT)
- Flash movies (.SWF)

Also, you can create such content types as [learning tracks](#), [courses](#), [assignments](#), [longreads](#), and add [web links](#) to external resources.

You can access the LMS content from any browser including mobile devices.
