

# iSpring Cloud

iSpring Cloud is an ultimate solution for presentation sharing. It lets you rapidly share, demonstrate, and embed media presentations while maintaining ease-of-use. iSpring Cloud allows you to generate a variety of statistics on the content in the account.

The screenshot displays the iSpring Cloud interface. At the top left, it says 'Repository' with a dropdown arrow. To the right is a search bar and a user profile icon. Below this, there's a section for file management with an 'Upload' button and a 'New' dropdown. A message says 'Use this page to share files.' Below that, there's a toolbar with '1 item selected', 'Download', 'Rename', and 'More' options. A table lists files in the repository:

File Name	Actions	Share
My presentations	-	-
Company Story.mp4	Link icon	Share button
Company Story (1).pptx	Link icon	0
Getting Start ... iSpring Cloud.mp4	-	0
IMG_20160509_194128.jpg	Link icon	0

On the right side, the 'PROPERTIES' panel for 'Company Story.mp4' is shown. It includes a video icon, the file name, size (13.88Mb), and update date (15/08/2016 08:38). The 'Sharing' section has a green toggle switch and a share link: <https://ispri.ng/zR6N>. Below this, the status for 'Password' (Disabled), 'Sharing' (Enabled), and 'Download' (Enabled) is listed.

The easiest way to share your iSpring content is to use iSpring Cloud solution. Starting with version 7.1, Cloud will be available as an extra tab in the Publish window. Being perfectly tailored for presentation sharing, iSpring Cloud also deals with many other file formats just like that:

- PowerPoint presentations
- Video (.mp4)
- Audio (.mp3)
- Images
- Text documents (.pdf, .doc, .xls)
- iSpring created courses with quizzes and simulations.

When presentations are uploaded to Cloud, they are automatically converted to a cross-platform content while retaining all the applied PowerPoint effects.
