The Book interaction allows you to arrange text and images on book pages and publish them as an interactive book.

**EARTH**

Earth (1 AU from the Sun) is the largest and densest of the inner planets, the only one known to have current geological activity, and is the only place in the Solar System where life is known to exist.

Its liquid hydrosphere is unique among the terrestrial planets, and it is also the only planet where plate tectonics has been observed.

Earth's atmosphere is radically different from those of the other planets, having been altered by the presence of life to contain 21% free oxygen. It has one natural satellite, the Moon, the only large satellite of a terrestrial planet in the Solar System.
