

Adding Interactions

iSpring's Presentation Explorer allows you to insert interactions into PowerPoint slides using the Object column.

To add an interaction to a particular slide:

1. Click the **Interaction** button in the **Object** column
2. Select one of the options from the drop-down menu:
 - **Create New Interaction**
Select this option to create a new interaction in the iSpring Visuals editor
 - **Import Interaction from File**
This option allows you to select one of the existing interactions to insert into the slide.

Once you add your interaction to a course, you can open it for editing in iSpring Visuals or remove it from the slide.

Read [iSpring Visuals User Guide](#) to learn how to create interactions.
