Publishing to iSpring Viewer App

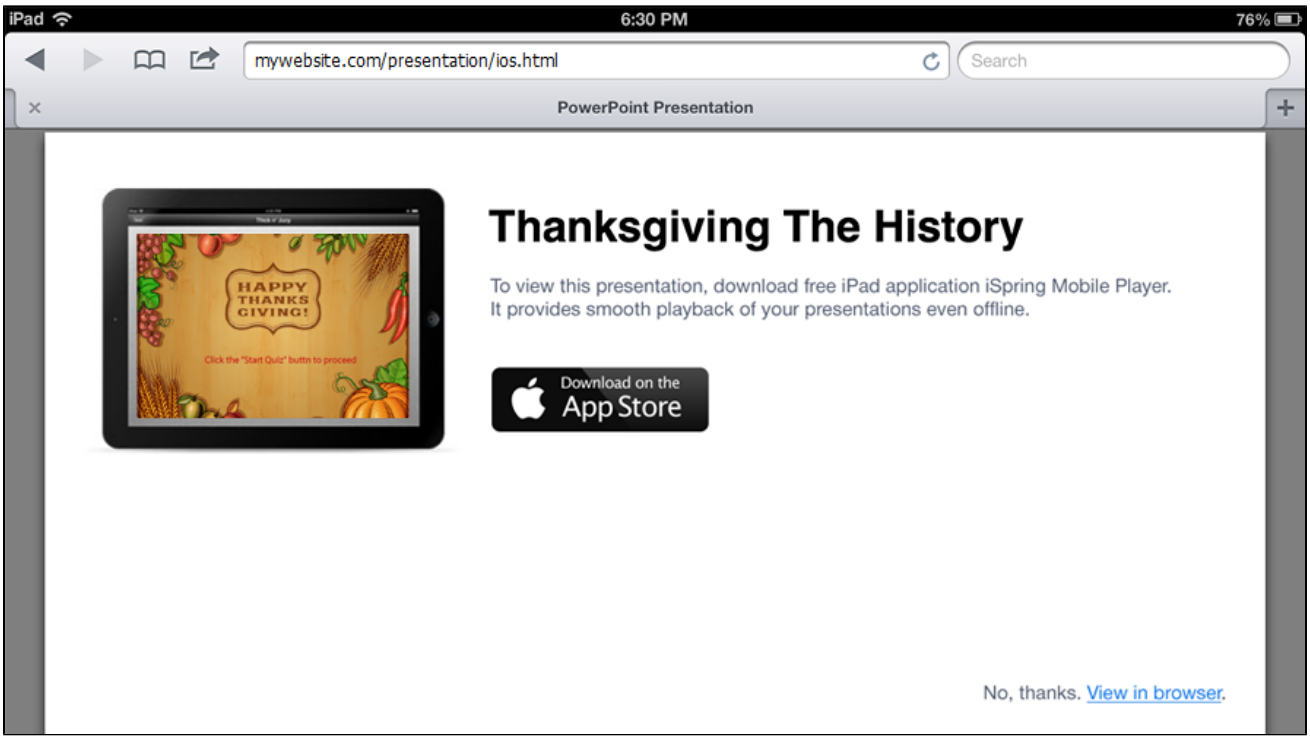

iSpring Suite offers an easy way to make your presentation more effective. With iSpring Viewer, you can access your presentations on a wide range of devices, including iPads and Android tablets, even offline. Compatibility requirements: iOS 6.0+, Android 4.0+.

To view a presentation on a tablet, mark the following options when publishing for the web:

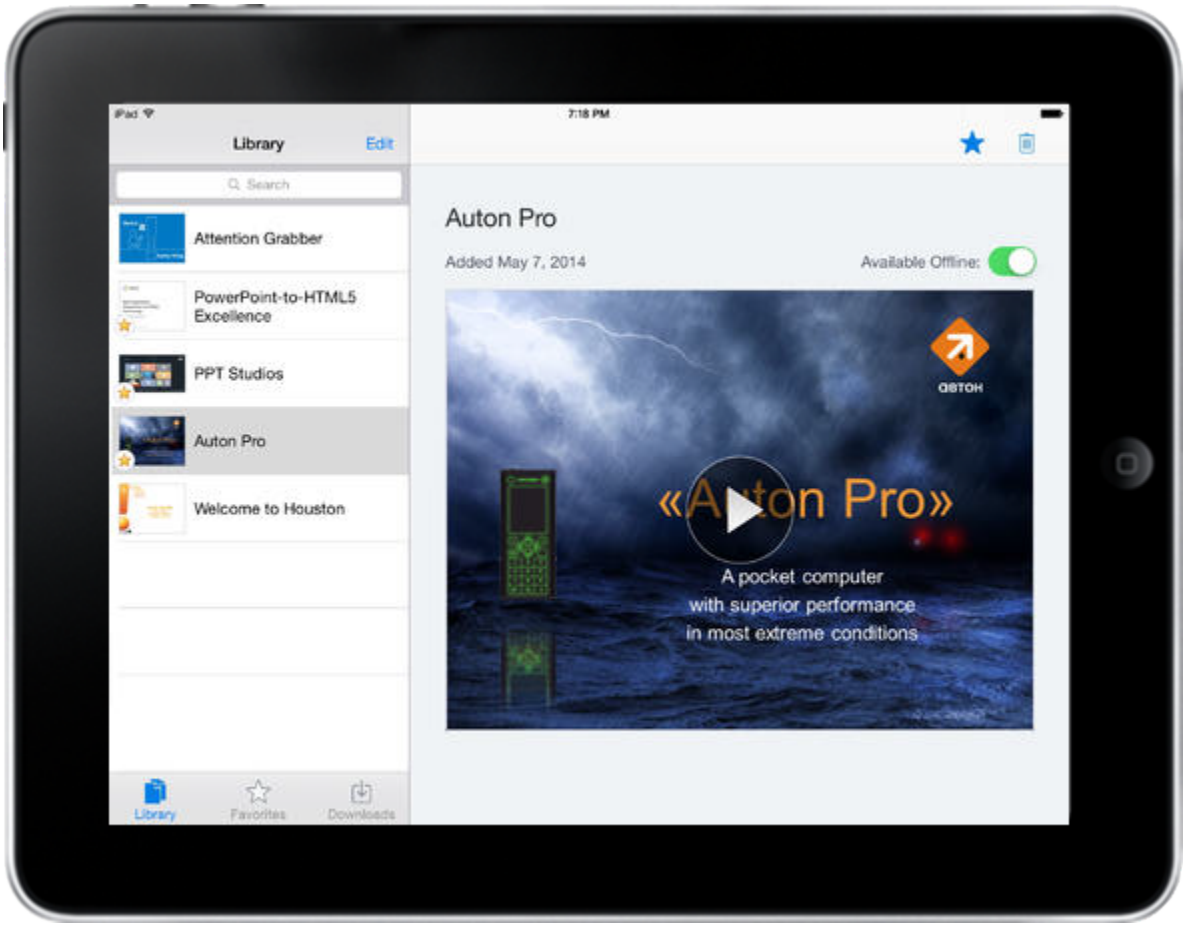

1. Select the **Use iSpring Viewer** checkbox.
2. Upload your published presentation to any web site and share the link to the presentation with your users.
3. Open the presentation link in the browser on your tablet. You will see the screen with the **Launch** button.
4. Tap **Launch** to view your presentation in the iSpring Viewer app.

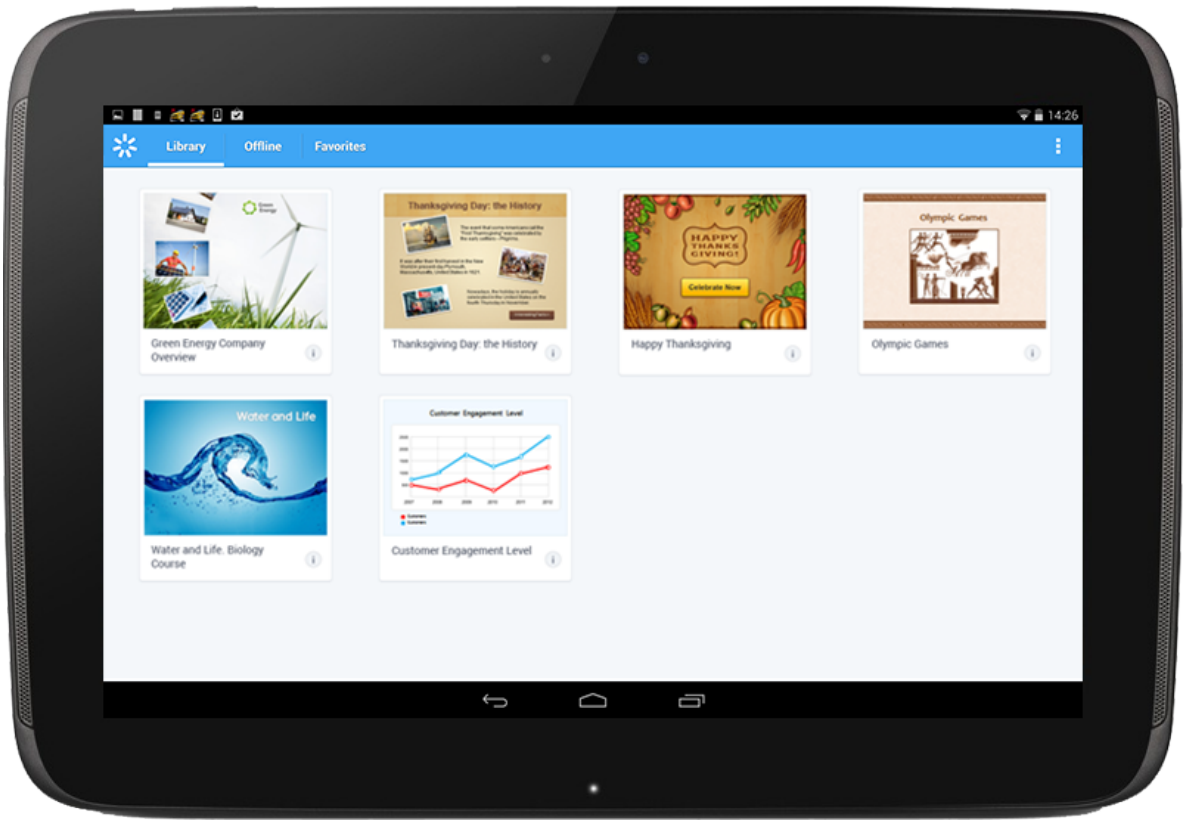

If the application is not installed on your device, you'll be asked to download it from the Apple App Store or Google Play.

To start the presentation playback, select a presentation in the list and tap the **Play** button.

If you view a presentation on your Android device, tap the presentation thumbnail in the **Library** list.

You can access your presentations even when you are offline.

To download a presentation for offline viewing on your iPad, move the **Offline Viewing** slider to **On**. For Android devices, click the **'i' icon** on the presentation thumbnail and switch on the **'Available online'** slider. If you change the slider back to **Off**, the offline copy will be removed from your device.
