iSpring Visuals Guide

Welcome to iSpring Visuals Guide!

iSpring Visuals is a component of iSpring Suite. With iSpring Visuals, you can add media-rich interactions to your course to move e-learning courses out of the PowerPoint look.

Visuals currently supports 4 interaction templates: Book, Directory, FAQ, and Timeline.

With Book, you can easily create virtual books with page-turning effect. Directory consist of a list of terms that, when clicked, display multimedia-enhanced definitions. Timeline can be used to visualize events that happened along a certain period of time. The FAQ interaction allows to create a list of questions and answers.
