Identifying a User

Using API, you can get authorized with the Credentials object, which is passed with each method.

The Credentials object properties:

Parameter	Description
accountUrl	The base URL of the account, e.g. https://myaccount.ispringlearn.com
email	The **login** of *Account Owner*, *Account Administrator*, *Department Administrator, Publisher,* or a user with a custom role.
password	The password of *Account Owner*, *Account Administrator*, *Department Administrator, Publisher,* or a user with a custom role.
