

# Managing Notes

Slide notes are a convenient way to prepare scripts for recording audio narrations for your presentation. You can add them to slides in PowerPoint, but sometimes it's more convenient to edit them right in the narration editor.

When you open the narration editor, slide notes are displayed in the right part of the screen. You can edit them right in the **Slide Notes** pane.

If you don't need notes, you can close the Notes pane. You can always enable the **Notes** pane by selecting the **Show notes** checkbox on the **View** tab.

When you click **Save and Close**, all the changes you've made to your slide notes will be saved to the presentation.
