

# Feedback and Branching

You can define questions that you want your learners to take depending on their current answer. With **'Branching by Question'** enabled, you will be able to choose the next question for quiz takers based on a correct or incorrect answer. Choose the required question from the list for both correct and incorrect answers. The **'Branching by Answer'** option lets you create a quiz branching scenario based on users' answer choices.

The **Feedback** option enables you to give a custom explanatory feedback per each question. With the 'Feedback by Answer' option you can provide a detailed, meaningful feedback explaining why the selected answer choice is correct or incorrect.
