

Branching

iSpring QuizMaker allows to control the order of questions in quizzes depending on students' answers.

To enable branching for a given question:

1. In the Questions pane, select a question you want to set branching for.
2. In the Feedback and Branching tab, choose the Branching type "**By Question**".
3. Specify what to do for each outcome of a given question (correct, incorrect, partial answered).

- **Next question** - a user will be shown the next question in a quiz.
- **Finish a quiz** - a given quiz will be finished, a user will be taken to the Results screen.
- **Specified question** - a user will be taken to a specified question.
- **Beginning of Group** - a user will be shown the first question of the group.
- **Random Pool** - a user will be shown the first question of the randomized group.

Note: If branching has been disabled in [Quiz Properties](#), you will be prompted to click a link to enable it right on the Feedback and Branching tab.

Enabling branching in your quiz will automatically disable the following options:

- Passing score in points
- Randomize questions order
- Show subset of random questions
- Allow users to finish without answering all questions
- Submit all at once

To disable branching for a question:

1. Select a question in the **Questions** pane.
2. On the toolbar in the Branching drop-down menu, choose "**Disabled**".
