

# Changing Images and Equations

To replace an image with the new one in the Slide View editor:

1. Right click an image and select the **Change Picture** command
2. Locate a new picture in the **Open** window.
3. Click **Open**.

The new image will replace the existing one. With this method, you have the benefit of retaining the image position and size. You can apply the same action to an equation. The Change option opens the Microsoft Equation Editor where you can edit an existing equation.
