Animations

You can enhance your quiz with different animation effects.

iSpring QuizMaker 8 allows you to apply animation effects to the answer choices, change the speed of an animation or set a delay before an animation starts. It's beneficial when you want to give a quiz taker some time to read a question thoroughly and then display answer choices. Besides, you can add more life to the static content of your quiz slides and stimulate users' interest.

To configure the animation settings, switch to the Animation tab in Slide View mode.
