

Course Progress

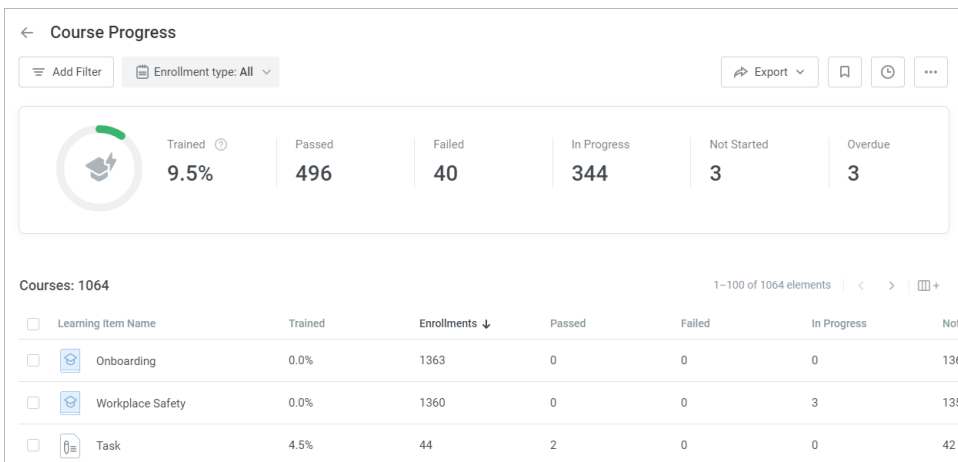

A new Course Progress report is a convenient option to check learners' progress on one or multiple courses. You can also check the statuses of courses that have already been assigned to users.

- 1. Open the **Reports** section, click **Courses**, and the report will be opened on the same page.

- 2. A summary of the entire report will appear above the table with the results.

Trained	To calculate this value, you need to divide the number of completed enrollments by the total number of enrollments .
Completed	The number of completed courses.
In Progress	The number of courses that users started to take, but didn't view till the end.
Not Started	The number of not-started courses.
Overdue	The number of courses whose due dates have already expired.

Notes:

1. By default, the report includes all account courses, even those that haven't been assigned to anyone.
2. The report shows only the enrollments assigned to **active** users.
3. *Department Administrator*, *Publisher*, and a user with a custom role will see all courses available in the account in the report. However, **only statistics on users belonging to departments they manage and their sub-departments** will be displayed in the report.

Let's say; the Sales Onboarding course is assigned only to learners from the Sales department. The administrator of the Accounting department will see the course in the report, but under the **Trained** column all values will be equal to 0.
4. The reports only contain courses that are already assigned, not future enrollments scheduled according to **automatic enrollment** rules.
5. Deleted courses and courses assigned to deleted users aren't displayed in the report.
6. In the **Course Name** filter, you can select up to 10 courses.
7. Proceed to edit courses and check the progress and enrollment history of users, groups, and departments right from the report.
