

Basics

iSpring Learn is a multi-user system. After you create an account, you get your own administrator panel, where you can upload your content, add users and give them the rights to view certain content. You can also create a number of assistants (*Administrators*), who will also be able to add regular users (*Private Viewers*) and upload content. Also, you can add *Publishers* in your account: these users will be able to upload educational content.

iSpring LMS has five predefined user roles:

- Account Owner
- Administrators
- Organization Administrators
- Publishers
- Users

A role is a set of privileges granted to a user to perform selected tasks. For more information about users, see [Manage Users](#) and [Manage Groups](#).
