

iSpring Page

Creating educational materials is a challenging task. It's usually done by a team of professionals that handle high-quality content development. Such a team typically includes a copywriter, a designer, an editor, and a subject-matter expert.

iSpring Page is a portal for working together to create learning content. The development process takes place in a browser and doesn't require the installation of any programs. Microcourses can be taken on any device: desktops, laptops, tablets, and smartphones. Both iOS and Android mobile devices are supported.

The screenshot shows the iSpring Page interface. At the top left is the iSpring Page logo. To its right is a search bar labeled 'Search...'. In the top right corner is a user profile picture. The left sidebar contains navigation options: 'Recent', 'Starred', 'Shared with me', and a 'PROJECTS' section with a plus icon. Under 'PROJECTS', there are three items: 'Information Security', 'Marketing', and 'Sales'. At the bottom of the sidebar, it says 'page' and '1 member'. The main content area is titled 'Recent' and contains a table with the following data:

| <input type="checkbox"/> | Title | Type | Project | Viewed/Modified ↑ | Created by |
|--------------------------|-------------------------|-------------|----------------------|-----------------------|------------|

Long, voluminous materials that include images, videos, and exercises can be created in iSpring Page. In our product, they are called [pages](#). For example, you may explain how insidious hackers are and how to protect oneself from their attacks with a page entitled "Social engineering: How can you tell if someone is trying to hack you?"

☰

Social engineering: How can you tell if someone is trying to hack you?

- Introduction
- ☰ What social engineering means, and how hackers get...
- ☰ How to Secure your Data from Hackers
- ☰ 10 Rules of Information Security

INFORMATION SECURITY

Social engineering: How can you tell if someone is trying to hack you?

An information security awareness course for employees. Learn how cybercriminals steal confidential data and how you can avoid their psychological traps.

The second type of microcourses you can develop using iSpring Page is [online quizzes](#). Check up on your users' knowledge after an important topic has

been studied or verify their current level on a certain subject. For instance, create a quiz with questions on information security.

Question 1/3

What is a Trojan horse in computer terms?

A type of malicious computer software

An antivirus program

A computer game

Submit 

Materials can be combined in thematic [projects](#). In this way, you not only organize content items, but you also get an opportunity to provide your teammates with access to its editing process and viewing aspects. Let's say you can add materials on protecting data from cybercriminals to the Information Security project and grant read/write access to all team members or to some of them.
