The easiest way to share your iSpring content is to use iSpring Cloud solution. Starting with version 7.1, Cloud will be available as an extra tab in the Publish window. Being perfectly tailored for presentation sharing, iSpring Cloud also deals with many other file formats just like that:

- PowerPoint presentations
- Video (.mp4)
- Audio (.mp3)
- Images
- Text documents (.pdf, .doc, .xls)
- iSpring created courses with quizzes and simulations.

When presentations are uploaded to Cloud, they are automatically converted to a cross-platform content while retaining all the applied PowerPoint effects.
