

# Upgrading from a Business to a Concurrent License

To upgrade from your Business license to a Concurrent license, follow the steps below:

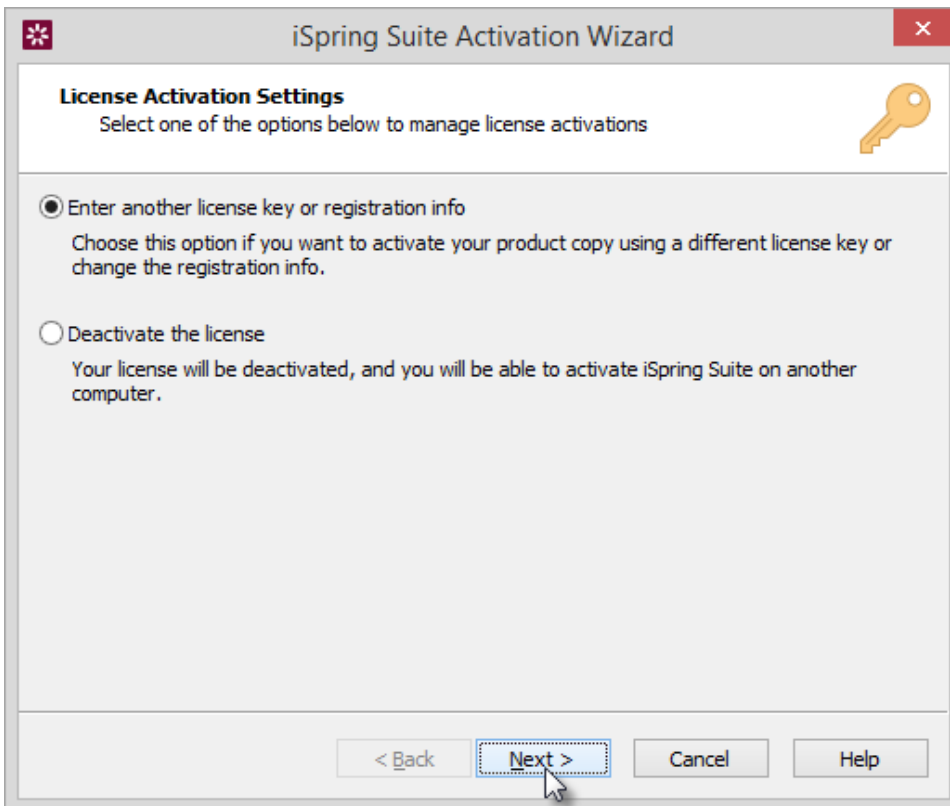

1. Install the new product without uninstalling the old one. You can use this [video instruction](#) to install iSpring Suite.  
If your product version is 8.3.1 or higher, a fresh installation is not necessary. You can check your version in the About window.
2. Open iSpring Suite and click **About** on the toolbar.

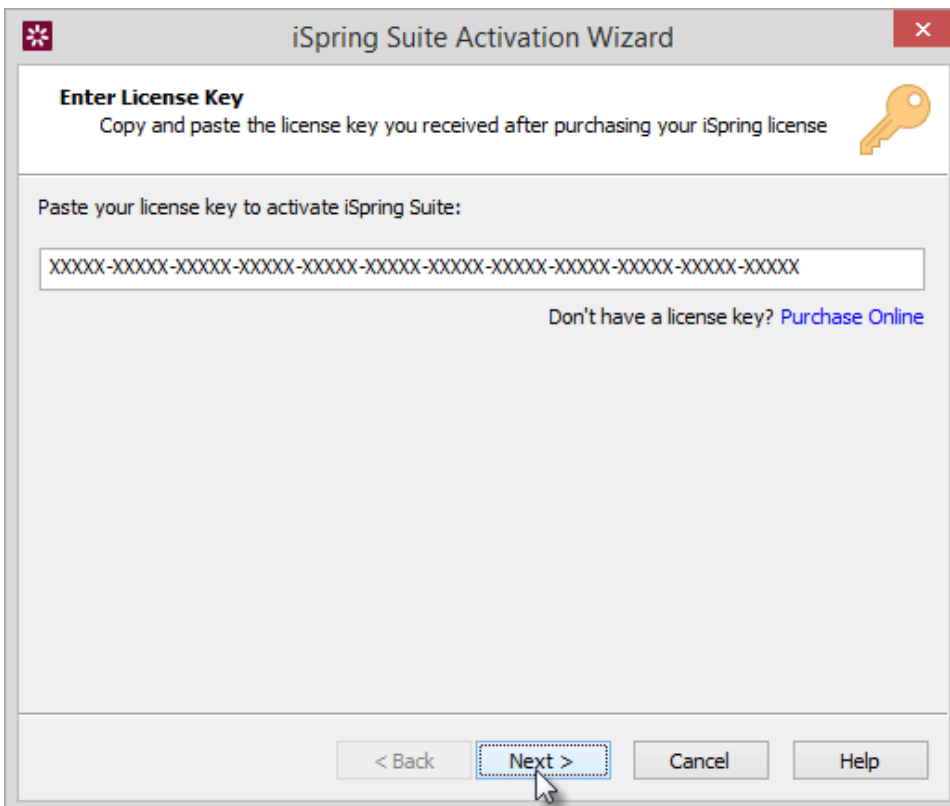

3. In the About window, click **Change License Key**.

4. The Activation Wizard window will pop up. Keep the checkbox 'Enter another license key' selected and click **Next**.

5. Insert the **concurrent license key** and click **Next**. Use the same key that you specified for the License Server activation.

6. Specify the computer name where the License Server is installed. If both client and server parts are installed on one and the same computer, then type in '**localhost**'.

The image shows the 'iSpring Suite Activation Wizard' dialog box. The title bar includes a red close button. The main header area contains a key icon and the text 'Enter Server Name and Port' and 'Enter server name and port to connect to the license server'. Below this, a message states: 'You have entered a key which requires a connection to the license server.' The 'Name of computer on your network with license server:' field contains 'localhost' and is highlighted with a red border. The 'Use port:' field contains '9979'. At the bottom, there are four buttons: '< Back', 'Next >', 'Cancel', and 'Help'. The 'Next >' button is highlighted with a blue border.

**iSpring Suite Activation Wizard**

**Enter Server Name and Port**  
Enter server name and port to connect to the license server

You have entered a key which requires a connection to the license server.

Name of computer on your network with license server:  
localhost

Use port:  
9979

< Back   Next >   Cancel   Help

7. In the 'Use port' field, specify the same port that you indicated in the Server License Management Console. The default value is 9979. Click **Next**.

This image is identical to the one above, showing the 'iSpring Suite Activation Wizard' dialog box. In this version, a mouse cursor is pointing at the 'Next >' button, which is highlighted with a blue border. The 'localhost' field is also highlighted with a blue border, while the '9979' field remains highlighted with a red border.

**iSpring Suite Activation Wizard**

**Enter Server Name and Port**  
Enter server name and port to connect to the license server

You have entered a key which requires a connection to the license server.

Name of computer on your network with license server:  
localhost

Use port:  
9979

< Back   Next >   Cancel   Help

Your product is now activated. You can start using the iSpring product if there are any available connections (floating licenses) on the server.
