

E-Commerce Settings

You can use iSpring Learn to sell your courses uploaded to your account. Before you enable E-Commerce for your course, you should configure your payment options to be able to accept payments online. For now, iSpring Learn supports PayPal and Authorize.Net payments processing.

To link your account to your iSpring Learn account:

1. On the **Settings** page, click the Additional Options tab and choose **E-Commerce** section.

2. Select the **Enable payment methods** option and choose the payment method: [PayPal Website Payments Standard](#) or [Authorize.Net](#).

3. Depending on the selected payment method, follow one of the steps below:
 - a. To start accepting **PayPal** payments, enter your **PayPal ID** (the email address that you use to log in to your PayPal account).
 - b. To activate **Authorize.Net** payments, enter your **API Login ID** and **Transaction Key**.
4. Choose currency from the corresponding drop-down menu. Prices for paid content items will be set in this currency. If you choose **Authorize.Net**, you can accept USD payments only.

Note: If you change your currency here, iSpring Learn WILL NOT convert existing prices for paid content, it will just change the currency. So make sure you change the prices as well.

5. Enable email notifications to administrators about each purchase.
6. Click the **Save** button.
