

Publishing Presentations

Click the **Publish** button on the iSpring Suite toolbar to open the Publish Presentation window.

The **Publish Presentation** window allows you to publish presentations to **HTML5** or **Video (MP4)** format and manage the output settings.

Publishing Destinations

There are the following destination tabs in the Publish Presentation window:

- **My Computer**
Select this option to publish the presentation to your computer for further distribution via the Internet.
- **iSpring Cloud**
Publish your presentation to iSpring Cloud, a sharing service that allows you to upload, view and distribute not only presentations, but also courses, quizzes, simulations, interactions, audio, video, and documents.
- **iSpring Learn**
Publish your presentation to your iSpring Learn LMS account and track users' learning activities.

- [LMS](#)
Select this option to prepare your presentation for uploading to an LMS that supports SCORM, AICC, Tin Can, or cmi5.
- [YouTube](#)
Upload your converted PowerPoint presentations to YouTube, with all effects and background audio preserved in .mp4 format.

Also, you can [publish the presentation to run in iSpring Play mobile app](#).

Output Options

Specify individual settings to publish your presentation in the Output Options section:

- [Output Format](#)
Choose the format in which to publish your presentation. You can choose HTML5 or MP4 video format.
- [Player](#)
Choose the player which will be used to play the published presentation.
- [Size](#)
Choose how the presentation behaves in a browser: the display size, and whether it adjusts to the size of the browser window or scales to the specified size in percent.
- [Quality](#)
Change the quality settings for images, audio and video files added to the presentation. The higher is the quality, the larger is the size of the published presentation.
- [Protection](#)
Change these settings to protect your course from unauthorized access and distribution. You can protect the course with a password, add a watermark to every slide, put a time limit on the course display, and allow its playback only from a specific domain.
- [Number of published slides](#)
Specify how many slides to publish: only the selected slide, or all the slides in the presentation.
- [Accessibility](#)
Create accessible content for users with visual impairments.
- [Slide Duration](#)
Configure for how long the slides without timed elements will be shown to users.
- [LMS settings](#)
Customize your course for publishing to a specific LMS compatible with iSpring Suite.
