HOW TO CREATE A COURSE IN MOODLE

A lesson in Moodle is a complete training session with theory and practice. The theory helps to convey knowledge through lessons containing text, images, and videos; hands-on activities such as quizzes allow you to check how much the student has learned.

Creating a lesson in Moodle will take a new user from 30 minutes to an hour. If you need to make it quicker and easier, you can use the iSpring Suite authoring tool. In this article, we'll demonstrate how to build the same lesson in Moodle and in the iSpring Suite authoring toolkit, so you can decide which tool works best for you.

Creating a Lesson in Moodle

As an example, we'll build a course on Planets and a lesson on Solar System.

Step 1: Create a New Course in Moodle

According to the logic of Moodle, you can't create a lesson without creating a course first. To create a new course, go to **Site Administration** → **Courses** → **Add a New Course**. Enter full and short course names ("Planets") and click **Save and Display**.

Now go to **Participants** and enroll yourself in the course; this way, it'll appear in the list of available courses. Click Enrol users, enter your name in the pop-up window, and choose Manager from the dropdown menu. Then click Enrol users.

Step 2: Add a Lesson to the Course

Switch on the Edit mode.

Then click +Add an activity or resource. The Moodle toolbar will appear on the screen.

Click Lesson in the Activities section.

In the new window, we'll need to set up four sections:

- **General:** Enter the name of the lesson and its description.
- **Appearance:** Configure the lesson design. Would you like learners to see a progress bar or demonstrate the lesson as a slideshow?

- **Flow Control:** Set up the rules for taking the lesson. For example, it'd be wise to allow learners to view the lesson on fire safety several times, but for an exam session, it's better to give just one attempt.
- **Grade:** Determine the rules of assessment. Will you use points or a scale to evaluate the results? What is the passing grade? For the sample lesson, set four points as the passing grade as there are four test tasks.

Click **Save and display**.

Step 3: Create a Question Page

To add a question, click **Add a question page** in the **Actions** column. In the new window, select a question type and click **Add a question page**.

[Add a new page](#) / [Select a question type](#)

Planets

[Course](#) ▾ [Activity](#) ▾

The Solar System consists of the Sun and the astronomical objects gravitationally bound in orbit around it, all of which formed from the collapse of a giant molecular cloud approximately 4.6 billion years ago.

Once you've added all answer options, click **Save page**.

Step 4: Create a Content Page

The content page is a building block for creating a lesson in Moodle. It may contain text, pictures, audio or video. Click **Add a content page** to create one, then enter a page title and its contents.

Below, you'll also see a **Content 1 (Content 2, Content 3, and so on)** section. Using these fields, you can set up navigation within a lesson. Each Content is a button that forwards a learner to another slide of the lesson. For instance, you can create buttons for every page of the lesson, so learners will be able to jump from the first page to the last one. If you prefer closed navigation and don't fill in the Content fields, learners will have to study the pages one by one.

🖼️ 😊 📄 📎 🎤 🎥 🗨️

The four inner or terrestrial planets have dense, rocky compositions, few or no moons, and no ring systems. They are composed largely from refractory minerals, such as the silicates, which form their crusts and metals such as iron and nickel, which form their cores.

☒ Arrange content buttons horizontally?

☒ Display in menu?

For the sample course, we don't need any extra navigation buttons except Next.

For our sample course, we'll set up closed navigation and create just one button, Next, that leads to the next page.

Step 5: Add More Content and Question Pages

Create the rest of the pages using the lesson source file. Also, don't forget to create the Next button by entering the word Next in the **Content 1** description and choose to jump to **Next page** on each new page you add.

The lesson is ready. You can preview it through the admin panel.

The screenshot shows the iSpring Suite admin interface. At the top, there's a navigation bar with 'Mount Orange School', 'Home', 'Dashboard', 'My courses', and 'Site administration'. On the right, there are icons for search, notifications, a user profile, and an 'Edit mode' toggle. The main content area is titled 'Planets' and has two tabs: 'Course' and 'Activity'. The 'Activity' tab is selected, showing a text box with the following text: 'The Solar System consists of the Sun and the astronomical objects gravitationally bound in orbit around it, all of which formed from the collapse of a giant molecular cloud approximately 4.6 billion years ago.' Below this text box are three buttons: 'Edit lesson' (highlighted in blue), 'Edit page contents', and 'Grade essays'. A light blue notification bar states 'Lesson is currently being previewed.' with a close button. Below the notification, there's a question: 'Select the four inner planets of the Solar System:' followed by three checkboxes: 'Mercury', 'Mars', and 'Venus'.

Creating a Lesson in iSpring Suite

If the built-in Moodle editor isn't enough to create lessons and courses you need, you can use [iSpring Suite](#). This comprehensive authoring tool allows you to create literally any type of eLearning content, including slide courses, training videos, smart screencasts, scenario-based simulations, 14 types of interactive quizzes, and cheat-proof assessments.

The best part is that it works directly in the familiar PowerPoint interface, so the learning curve is minimal. Its incredible ease of use and [smooth integration with Moodle™](#) software via the iSpring plugin make this

authoring tool ideal for educational institutions, academics, and teachers worldwide:

To start creating a course with iSpring Suite, first [sign up for a free 14-day trial.](#)

Step 1: Create Info Slides

Create a new presentation. We don't need to use any additional functions so far; just create enough slides and fill them with information.

You can set custom backgrounds for slides to make them more informative and attractive. Go to the **Design** tab and click **Format Background**. Choose **Picture or texture fill** in the right pane and then select an image you'd like to use from your computer. For the cover page of the Solar System lesson, we used a photo with stars.

With iSpring Suite, you can use the familiar PowerPoint interface to create info slides.

Step 2: Add Quiz Questions

In the sample lesson, there are four test questions. While you can create six basic question types with the built-in Moodle editor, there are 14 types of tasks in iSpring Suite. Go to the iSpring Suite tab and click the **Quiz** icon to launch the QuizMaker tool.

You can create 14 types of questions: Sequence, Matching, Drag & Drop, and more.

In the new window, choose **Graded Quiz**.

The first test question in the lesson is a Multiple Choice. Click **Question** in the upper left corner of the ribbon and choose the necessary question type. If you pay attention to the preview icons in the drop-down list, you'll get an idea of how each question will look on the slide.

Place the cursor on the question type to see the preview.

iSpring QuizMaker has an interface that is similar to Microsoft Word, so it's easy to work with text. Fill in the **Question**, **Choices**, and **Feedback** fields. Then go to the **Quiz Results** section in the left pane.

The screenshot shows the iSpring QuizMaker interface in 'Form View'. The main area displays a 'Multiple Response Question' with the text 'Select the four inner planets of the Solar System:'. Below the question, there is a 'Choices' section with a table of options. The 'Correct' column has checkboxes for Mercury, Venus, Earth, and Mars, which are all checked. The 'Score' column shows a score of 10 for the correct response and 0 for the incorrect response. The 'Feedback and Branching' section shows feedback for both correct and incorrect responses. The right pane shows 'Slide Options' for the question, including 'Question type: Graded', 'Feedback: By Result', 'Score: By Result', 'Attempts: 1', and 'Shuffle answers' checked.

Correct	Choice	Score
☒	Mercury	10
☒	Venus	10
☒	Earth	10
☒	Mars	10
☐	Jupiter	0
☐	Uranus	0

	Feedback	Branching	Score
Correct:	That's right! You chose the correct response.	→	10
Incorrect:	You did not choose the correct response.	→	0

You can also customize the question slide design using Slide View.

In the **Quiz Results**, enter custom feedback for learners who pass or fail and un-check all the boxes, save for **Allow user to retry quiz** (for the Failed tab), in the **Result Slide Options** to the right. In our sample, we don't need to show the user's score or set a passing score, so we'll leave only one button, Retry, on the Results slide. You can experiment with different configurations and click **Preview** on the ribbon to see what it'll look like.

The screenshot shows the iSpring QuizMaker interface in 'Form View' for the 'Quiz Results' section. The main area displays the 'Quiz Results' section with a 'Passed' tab selected. The 'Finish Action' dropdown is set to 'Close browser window'. The right pane shows 'Result Slide Options' for the 'When quiz is finished' section, including 'Show slide with results', 'When user passes', and 'When user fails' sections. The 'When user fails' section has 'Allow user to retry quiz' checked and set to 'Once'.

When quiz is finished:
Show slide with results

When user passes:
☐ Show user's score
☐ Show passing score
☐ Allow user to review quiz
☒ Show correct answers
☐ Show detailed report
☐ Show results by group
☒ Show answer results
☐ Allow user to print results
☒ Allow user to retry quiz: Once

Let's add three more questions. To make the lesson more interactive, let's use some question types that aren't present in the Moodle editor.

Sequence question. You can ask learners to choose not only one response, but organize options – in our case, planets – in the correct order.

Sequences are more fun than multiple choice questions.

Drag and Drop question. For example, you need to check how well students know which planets are terrestrial. The drag and drop feature turns an ordinary question into a game, where the learners can pick up different planets and drag them to the Sun.

Question List

Drag the four terrestrial planets of the Solar System to the sun:

Venus

Mars

Earth

Neptune

Uranus

Mercury

Jupiter

Saturn

Your Score: 0 of 10

Question 1 of 1

Submit

Answering drag-and-drop questions is more fun than answering theoretical questions.

Hotspot question. In hotspot questions, students should mark an object or objects, which is much more engaging than answering standard questions.

Show, not tell.

When creating questions, you can also check how they look in the **Slide View** and customize the fonts and size of text and objects, and insert images.

Step 3: Polish your quiz design

Once your quiz is almost ready, you can customize its look and feel to match the rest of your course or your brand identity. Use the pre-designed themes with trendy colors and graphics to make quizzes eye-catching and tweak every detail – from slide backgrounds to checkbox colors.

1. Go to the **Color Scheme** on the top panel. In the **Slide Elements** tab, you can select the color and transparency of slide elements, including element borders, controls, and markers. Choose the colors for the default, hover, and active states.

2. Next, choose whether to apply the color settings to all slides or this particular slide only.

Step 4: Publish to Moodle™

When the lesson is ready, you can see what it looks like on different devices in the **Preview** mode:

If you're satisfied with the result, it's time to publish your course to Moodle™. As mentioned earlier, iSpring Suite smoothly integrates with the LMS via the iSpring Module plugin. It allows course developers to publish courses directly to Moodle™ software and access comprehensive visual LMS reports on iSpring quizzes and role-play simulations.

Before uploading a course to Moodle, first you need to install the iSpring Module plugin. Check a brief instruction on how to do it quickly:

[How to install the iSpring Module plugin for Moodle™ →](#)

1. Once you've installed the plugin, click on **Publish** on the iSpring Suite toolbar:

2. In the LMS tab, select **LMS profile** → **Moodle**. Then, customize the progress and completion of the course: the number of attempts available, maximum score, and passing score.

3. Click on **Publish**. You'll see a .zip file that you can upload to Moodle™.

With the iSpring Module plugin for Moodle™ software, you can access detailed visual LMS reports on quizzes and role-plays as soon as a student completes the course, ensuring all attempts are effectively tracked.

Gather, filter, and analyze data such as time spent on training, scores, completion rates, and more – while keeping your statistics intact, even when reloading content.

To Sum Up

The benefit of the **Moodle™** editor is that it's free and you can build content right on the platform. It's comprehensive, but one potential drawback for some users might be its complex interface. Every content item – a course, a lesson, or a quiz – consists of individual pages. Each page must be individually set up. In short, many steps must be taken to prepare a lesson that will catch a learner's attention.

iSpring Suite, on the other hand, has a highly-intuitive interface that allows you to quickly build professional-looking lessons for **Moodle™** without the need to create numerous pages or spend hours learning how it works.

This plugin makes reviewing student performance faster and easier. Clear, organized reports allow you to accurately evaluate learner progress, including their achievements and areas where they struggle. This helps you identify specific knowledge gaps and address them more effectively, ensuring that learning materials are continuously improved.

The best authoring tool for Moodle™

Create online teaching materials in no time, smoothly upload them to Moodle™, and track your learners' progress with easy-to-read reports. [Learn more →](#)
